

Diaphragm aerators for sanitary systems

Item	Colour	ø e mm	S mm
AIRSB	white	140	40
AIRSG	grey	140	40
AIRSCR	chrome	140	40

Description: “AirStop” diaphragm aerator

Material: PVC plastic

Features: Airstop is a patented product suitable for sanitary system pipes, it avoids the formation of pressures and depressions in the waste pipes which cause siphoning and self-siphoning events. Airstop is resistant to physical and atmospheric chemical agents and can be installed indoors or outdoors. Airstop opens during the water discharge and closes by gravity when the depression ceases, thus avoiding the emptying of the siphons and the escape into the atmosphere of unpleasant odors coming from the sewer system.
